BPCard™

Real-time Results

... the blood pressure device made for your EMR. Finally, there is a blood pressure meter that matches the quality and reliability of your old mercury manometer.

Aneroid manometers require regular calibration and mercury is banned in many countries, making digital blood pressure the practical solution.

The BPCard ensures compliance with the American Heart Association (AHA) and British Hypertension Society (BHS) guidelines for the manual measurement of blood pressure.

- BPSure™ patented algorithm meets ANSI/AAMI SP10:2002.
- Gold standard auscultatory (K-Sound/Riva Rocci) method.
- Eliminates human error caused by observer bias, technique, etc.
- Manual inflation for user control and maximized patient comfort.
- Automated deflation at AHA/BHS recommendations.

Visit www.QRSdiagnostic.com for Specifications and System Requirements.

Compatible with off-the-shelf laptop, tablet and desktop computers.

Seamless EMR integration.

USB adapter included.

- Automatic input into your EMR.
- Eliminates aneroid calibration and mercury.
- Accurate in noisy environments.
