

Omni III®

Infinium Omni III®

Versatility in Patient Monitoring

INTUITIVE

Designed for a fast-paced work environment, the Infinium Omni III® offers a simple and adaptable user interface. Patient information along with vital sign settings can be quickly modified to meet the needs of a patient's changing condition. The Omni III® offers a high-resolution 15-inch touch screen to optimize the speed of patient care. Clinicians can make quick screen adjustments, set default settings, alarm limits, and manage up to 120 hours of detailed patient data.

UPGRADABLE

From the general floor to high acuity surgeries, Infinium Omni III® series patient monitors are designed for flexibility and fit well across many patient care settings.

Vital sign parameters include:

- NIBP (IBP Optional)
- Cascading ECG with arrhythmia detection
- Masimo SET® SpO2
- Temperature, pulse, and respiratory rate
- **Optional:** EtCO2, anesthetic agent, cardiac output, and BIS monitoring

The Omni III® can move from a basic vital signs monitor, to a continuous bedside monitor, to an operating room monitor while keeping the patient on a single monitor at all times.

Masimo SET™

CONNECTED

The Omni III® offers Ethernet and RS-232 connections with an open-source communication protocol and is HL7 compliant. The HL7 network protocol will allow for all patient information and vital sign trends to be transferred and stored on a hospital information system. For non-HL7 medical facilities, there is the Infinium Omniview™ central station which allows the real time remote monitoring and network of up to 64 Omni patient monitors.
